Washington, D.C. 20044

Dear Mr. Topol:

I am attaching my analysis and audit of the Federal Trade Commission 'tar', nicotine and carbon monoxide figures dated March 1983 (Test No. 25).

There is now substantial agreement between the average determination values for monitor cigarettes between the FTC and TITL laboratories, but the nicotine values for the TITL laboratory results average 4.2% higher than that for the FTC laboratory.

The use of a new monitor cigarette has produced monitor results considerably lower than in prior tests. I comment about the implications of this change in the attached report.

Sincerely,

Herbert Arkin
